Mar 12, 2021 · Scientists have discovered a 47-million-year-old fossilized fly with its stomach still full from its last meal. The previously unknown species was found frozen in rock sediment at ...

**Diptera Fossil Insect Gallery - Flies & Gnats**
Diptera Fossil Insect Gallery - Flies & Gnats. Insect order diptera, the true flies (diptera means two wings), are believed to have first appeared during the Triassic more than 200 million years ago. Thus, they appeared during the great radiation of insects following the Permian extinction.
Fossils: Signs of early life | New Scientist
Aug 01, 2012 · Even flies and frogs preserved in amber are fossils. Although only a tiny percentage of everything that has ever lived is fossilised, fossils are our ...

Letting the Fossil Record Speak - JW.ORG
Regarding the finding of a fossil fly that was labeled “40 million years old,” Dr. George Poinar, Jr., said: “The internal anatomy of these creatures is remarkably similar to what you find in flies today.

www.creationism.org - Info - Fossils
FOSSILS - "The Creationist's Best Friend" (i.e. the fossil record) shows mass death and burial of former life around the world. A dead fish today doesn't sink - it floats. And if a human body is exhumed from 6 feet under it already shows signs of decay, not superb preservation.

The Most Bizarre Fossils Ever Discovered - Toptenz.net
Aug 09, 2021 · The team uncovered a lot of interesting fossils, but the most unique and bizarre one has to be one piece of amber that captured two long-legged flies from the family Dolichopodidae who were in the middle of mating when they became trapped in the sticky sap, with their moment of intimacy preserved for eternity in resin.

fossil | National Geographic Society
Feb 22, 2013 · Soft-bodied organisms, such as worms, are rarely fossilized. Sometimes, however, the sticky resin of a tree can become fossilized. This is called fossilized resin or amber. Amber can preserve the bodies of many delicate, soft-bodied organisms, such as ants, flies, and mosquitoes.

(PDF) Fossil psychodoid flies and their relation to
Triassic of North America and some Jurassic fossils are Some sand flies are also vectors of several animal try- attributed to this lineage (Kalugina & Kovalev 1985, Fraser panosomes (Wallace & Hertig 1968) and probably of an et al. 1996), the oldest genuine sand flies are from the Endotrypanum of sloths (Shaw 1964).

How Are Fossils Formed? - WorldAtlas
The Institute for Creation Research
One of the most spectacular living fossils is the coelacanth, a lobe-finned fish. Once known only from fossilized remains, this fish was considered by many to be a key transitional form (“missing link”) between fish and amphibians. Its fossils are found in Devonian strata, which are assigned a stunningly vast age of 400 million years.

The Compression Mating Fossil of Sciarid Fly (Diptera
Jul 01, 2017 · Preservations illustrating insect reproductive behaviors are much rarer in compression fossils than in amber. We discovered a copulating compression fossil of the sciarid flies from the Pleistocene Shiobara Group, Tochigi Prefecture, Japan, which is briefly described herein. The specimen represents one of the rare examples of a compression fossil showing ...

Fossil Diptera Catalog - Acroceridae
Larvae pass through 4 instars before emerging from the host and pupating; the entire life cycle sometimes taking over a dozen years. The 1994 fossil fly catalog recorded only Tertiary fossils. Since then, Mesozoic fossils have been discovered in southern central Asia and the Far East.

Fossils - Grand Canyon National Park (U.S. National Park)
Trace fossils represent the presence or behavior of ancient life, without body parts being present. Footprints, worm burrows, and insect nests are examples of trace fossils. Sedimentary rock contains fossils because it was built up layer upon layer, often trapping and preserving animals, plants, footprints, and more within the layers of sediment.

Apr 17, 2018 · Fossils entombed in amber are a unique resource for reconstructing forest ecosystems, and resolving relationships of modern taxa. Such fossils are famous for their perfect, life-like appearance. However, preservation quality is vast with many sites showing only cuticular preservation, or no fossils.

**Frog - Wikipedia**
A frog is any member of a diverse and largely carnivorous group of short-bodied, tailless amphibians composing the order Anura (literally without tail in Ancient Greek). The oldest fossil "proto-frog" appeared in the early Triassic of Madagascar, but molecular clock dating suggests their origins may extend further back to the Permian, 265 million years ago.
